seeweb

Seeweb is a cloud computing provider that has been providing high quality IT solutions since 1998.

Seeweb has a total of five data centers in Italy and one in Switzerland.

Seeweb offers innovative technology and know-how to support their customers' businesses.

www.seeweb.it

Seeweb manages hundreds of internal server backups as well as a large number of remote backups of servers at customer sites.

Cloutility provides **Seeweb** with a single-pane-of-glass solution on top of their backup infrastructure (**IBM Spectrum Protect**) and hereby enables **Seeweb's** administrators to unify the management of data center backups and backups at customer sites.

With Cloutility's multi-tenant capabilities, **Seeweb** is able to segregate all customer backups while consolidating them into a centralized backup infrastructure.

Seeweb's end-customers have access to self-service features and daily reports of backup status and consumption through Cloutility's user interface.

Cloutility's billing module automatically generates a billing output including all billing-lines each month which is used to automate the invoicing process, with data being pulled from Cloutility's extensive REST API.

"Auwau completes our product line, allowing us to provide our customers with a high-quality service that harmonizes and centralizes the backup systems. Auwau Cloutility software is the best way to consolidate the backup activities unifying the on-premise backup and the one in our data center."

Diego Alessandri, Sales Manager at Seeweb
