**Cristie Nordic** delivers data protection expertise, technology and services to managed service providers and enterprise customers. These customers deliver services to their own end-users thus creating the need for self-service capabilities.

By adding Cloutility software to their technology stack, **Cristie Nordic** achieved a single-pane-of-glass covering IBM Spectrum Protect, IBM Spectrum Protect Plus and Rubrik.

Supporting both “single sign-on” (SSO) and “2-factor-authentication” (2FA), Cloutility provides end-users with secure login and access to the business units (tenants) to which they belong and with privileges matching their job functions.

**Cristie Nordic** delivers CBS solutions (powered by IBM Spectrum Protect and Spectrum Protect Plus) and CLOUDBRIK solutions (powered by Rubrik) to their customers. Having a multi-tenant self-service interface which covers all above mentioned data protection engines allows reports, billing automation and other processes to be standardized and automated alike across the different data protection technologies.

*“Cloutility plays a big role for us in the effort of fulfilling the service providers’ needs in regards to end-user self-service, visibility, chargeback and automation of daily backup operation tasks. Cloutility speaks to the business of our customers and improves overall return on investment.”*

Magnus Thunberg, Solution Enabler Leader at Cristie Nordic AB
