

## Cloutility software

- Multi-tenant
- Self-service
- Reporting
- Billing automation
- ...and much more

# auwau

**Safespring** provides a sustainable platform for secure cloud services.

**Safespring** is a European provider of cloud and infrastructure as a service. Their platform is based on Open Source and applies open standards. Customers experience the benefits of the cloud, retaining control and digital sovereignty.

**Safespring** services are provided from secure data centers in Sweden and built upon OpenStack and Ceph.

[www.safespring.com](http://www.safespring.com)

**Safespring** has been providing backup as a service for many years. However requirements from their customers on more granular reporting, self-service and new ways of charge-back continued challenging their legacy solution.

Rather than continuing developing their legacy systems Safespring looked into the capabilities of **Cloutility**. The secure multi-tenant structure of Cloutility gives Safespring an easy deployment of reporting and self-service for each customer and their departments. Through an interface which keeps all tenants separate from each other Safespring can now provide each customer and tenant with required information on consumption and backup status.

The Cloutility user interface is easily rebranded so that Safespring can keep the look and feel of their own identity and brand.

On the licensing side **Cristie** in Sweden provides **Safespring** with a flexible and scalable bundle of both **IBM Spectrum Protect** and **Auwau Cloutility** licenses.

Add to that the secure data centers and expertise of **Safespring** and you have a world class data protection service.

*“Cloutility from Auwau gives us exactly the software platform we need to provide our backup admins and our backup customers with secure self-service, daily reporting, billing automation and much more. Everything is integratable through an extensive REST API architecture.”*

Fredric Wallsten, CEO at Safespring
